

BOEING
1/14/2009

I've had the pleasure of working with Philip Wik over the past four years on the Enterprise Supply Chain Management (ESCM) team. Philip supported our team in the role of IT Analyst/Developer and has been quick to learn and follow the Boeing IT processes in support of ESCM team projects and sustaining activities. Philip participated in process validations for with our team, which is rated at a CMMI level 3.

Philip was a key resource in team activities to support a major upgrade to a new version of the tool we support for our customers. This upgrade was a large project and required a Classic waterfall process methodology to support implementation. The project achieved implementation on schedule. Philip was willing to take on any requests and support the team where required. Philip has continued support maintenance activities for our customers and has always demonstrated a willingness to support any activity.

Philip has always shown great enthusiasm in support of any of our team goals, activities, projects, or processes.
